

Expanding Access to Healthy Nutrition

ADA-Aligned Nutrition Intervention

A 20-day daily intervention reaching 50,000 at-risk youth

Youth Nutrition Initiative

Teen Health Inc. and the NUI Foundation are registered 501(c)(3) nonprofit organizations.
Contributions to this program may be tax-deductible as allowed by law.

The Problem

Nutrition Inequity Is Driving
Long-Term Health Outcomes

1 in 5 youth
face food insecurity

1 in 3 youth
face metabolic risk

Key Points:

- Limited access to healthy food
- Early habits drive lifelong health
- High-sugar, low-fiber daily environments

Leads to:

- Blood sugar spikes → crashes
- Reduced cognitive performance
- Increased long-term **diabetes risk**

Access—not awareness—is the core issue

Target Population

A Large, Underserved At-Risk Population

- ~500,000+ students in San Diego County
- ~60% qualify for Free & Reduced Lunch
- ~30%+ face overweight/obesity risk

100,000+ youth
likely at elevated metabolic risk

Phase 1 reaches only a portion of the need with 50,000 youth.

Meet Teen Health

Trusted Community Partner

Teen Health's mission is to help vulnerable youth and young adults overcome barriers of access to healthy, nutritious food and support.

Vulnerable Youth

Youth (13–18) facing food insecurity, housing instability, or limited access to daily support.

Foster Care

Youth (12–18) in foster care who need stable nutrition, support, and a reliable foundation.

System-Impacted

Teens and young adults (13–17, 18–24) exiting the justice system who benefit from structure and stability.

Schools

Individuals in Special Ed or mental health challenges who benefit from consistent nutrition.

Why Teen Health

Teen Health delivers:

- 250+ Food & Beverage partners
- 100+ Nonprofit agency partners
- Health & life-skills education
- Daily on-site services

Serving youth where they already are — we strengthen outcomes through nutrition

Meet NUI Foundation

Expanding Access to Daily, Functional Nutrition

Delivering better-for-you snacks to schools, nonprofits, and community programs.

Designed for Simple Daily Distribution

Shelf-stable, ready-to-eat snacks that remove prep and refrigeration barriers.

Functional Nutrition for Sustained Energy

Low-glycemic snacks designed to support steady energy, focus, and stability throughout the day.

Designed for Effective Programs

Whole-Food Snacks

Nutritious products that deliver measurable energy and focus benefits in youth programs.

Daily Intervention

Reliable snack access that helps reduce hunger-related disruptions in learning environments.

Portion Controlled

Each snack is pre-portioned to prevent waste and manage calorie intake for optimal nutrition.

Balanced

Designed to support steady blood sugar and prevent energy crashes that affect concentration.

The Solution

A Daily, Low-Glycemic Nutrition Intervention

What it is:

- 1 snack per day, per youth
- Delivered through existing youth programs

Why it's different:

- ADA Better Choices for Life-designated
- USDA Smart Snack compliant
- Shelf-stable, no refrigeration needed

Clinical framing:

- Designed to:
 - Support stable blood glucose
 - Improve sustained energy
 - Increase cognitive engagement

Phase 1

20-Day Daily Nutrition Intervention

Deployment Model:

- Daily distribution across **10–30+ sites**
- Concentrated delivery → **consistent daily intake**
- High-frequency exposure → **stronger outcomes**

Immediate Outcomes:

- ↑ Sustained energy throughout program hours
- ↓ mid-day crashes
- ↑ focus, participation, and engagement
- ↓ staff intervention for hunger-related disruptions

Why Speed Matters

High-frequency, short-duration nutrition interventions produce faster behavioral and physiological signals than diluted long-term programs.

50,000
at-risk youth
20 servings each (20 days)

1,000,000
total servings

Designed to create consistent daily exposure—not one-time consumption. Consistency—not just access—drives outcomes

IMPACT

From Daily Access to Long-Term Outcomes

- Improved focus
- Reduced hunger
- Better daily nutrition

- Reduced glucose spikes
- Improved metabolic stability
- Lower long-term diabetes risk

Consistency—not just access—drives outcomes

COST + ROI

A High-Impact, Cost-Efficient Prevention Model

Cost:

- **\$40** per child
- Covers full **20-day** intervention
- all-inclusive, No additional implementation costs required
- **\$2,000,000** Total for Phase 1

Comparison:

- \$40/mo per child vs \$10,000+ annually per diabetes patient

Data Collected:

- Reach, adherence, engagement, and health impact metrics

Early intervention significantly reduces long-term cost burden

SCALE

From Community Initiative to Scalable Prevention Model

- Phase 1 → Community deployment
- Phase 2 → Expansion through population health programs
- Integration potential with broader healthcare systems

2.5–3.5M+ youth
likely at elevated metabolic risk in CA

Phase 1 represents a repeatable intervention model with 50,000 youth.
This model is designed to scale through programs like Medi-Cal and managed care

CLOSE

A Unique Opportunity to Lead in Preventative Nutrition

- Immediate impact in underserved communities
- Strong alignment with health equity goals
- Scalable pathway to broader healthcare integration

Ready to launch Phase 1 immediately

Thank you!

We're seeking mission-aligned partners to launch and scale this initiative.
We would welcome the opportunity to explore next steps together.

Schedule a short call to discuss how your organization could participate in the program.
